

Package installation

If there are any doubts about how to install software, please contact me before trying!

Employees may use sudo for apt commands to install software using the package manager. “sudo make install” should be avoided at all costs. Please install to your \$HOME or to /storage/local.

pip

To install python packages to your local directory, use the command

```
pip3 install --user <packagename>
```

CUDA

There is a central installation of regularly used software like CUDA, CUDNN, etc. You can use them by importing the environment variables using the command

```
module load cuda/13.0.1
```

If you need specialized software not available via apt or the module system, contact the sysadmin before installation to avoid breaking dependencies.

Data Security and Privacy

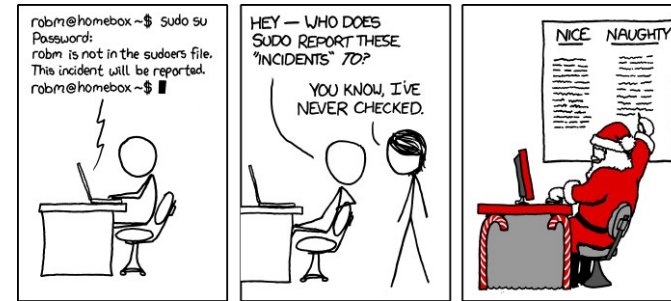

Never share passwords — neither with colleagues nor supervisors.

- Store personal data only in your home directory or /storage/user/.
- Sensitive research data should be encrypted.
- Report lost devices or suspicious activity to the sysadmin immediately.

First login checklist

- Log into your workstation and change your password (passwd).
- Join the Matrix chat room.
- Visit <https://adm9.in.tum.de>
- Visit <https://cvai.cit.tum.de/intern>

Policies

sudo

The chair's policy is that there is no general sudo rights. Employees do have a wide range of allowed sudo commands, which can be listed using the command **Issudo** in a console. For everything else, please contact me directly.

Updates

Updates are installed by me regularly on announced update-weekends. During these weekends, the computers will be force updated and rebooted. The announcements go to the chair's mailing list (vision@in.tum.de).

The computers are set up to report when idle, meaning no user processes are running and nobody is logged in, neither remotely nor locally. When I receive this notification, I will also start an update run.

Shutdown/Logout

In order to install updates during idle time, please log out after use, but do not shut down the computers. Also make sure you have no unused screen/tmux/byobu/generic background session running.

Matrix chat rooms

You can join the matrix chat rooms on <https://matrix.tum.de>.

- Public matrix chat room:
#inf9pub:in.tum.de
- Employees only matrix chat room:
#i9:in.tum.de
You can use a Matrix bot to invite you into this room. Please fill in your matrix ID at <https://adm9.in.tum.de/userman>. You will find the invite button on the internal pages at <https://adm9.in.tum.de/matrixinvite>
- Your Matrix ID is @<TUMID>:tum.de
e.g: @ab12xyz:tum.de
- Your Matrix Home Server is
matrix.tum.de

Contact

Please feel free to contact me on any problems you might encounter:

Room: 02.07.012

Office hours:

Monday, Tuesday, Thursday, Friday: 09:00 – 16:00

Wednesday: “Home Office” day, telephone or mail

Phone: 089.289.17769

Mail: quirin.lohr@in.tum.de

Secretary Sabine Wagner

Room 02.09.052

Phone 089.289.17756

Mail: sabine.wagner@in.tum.de

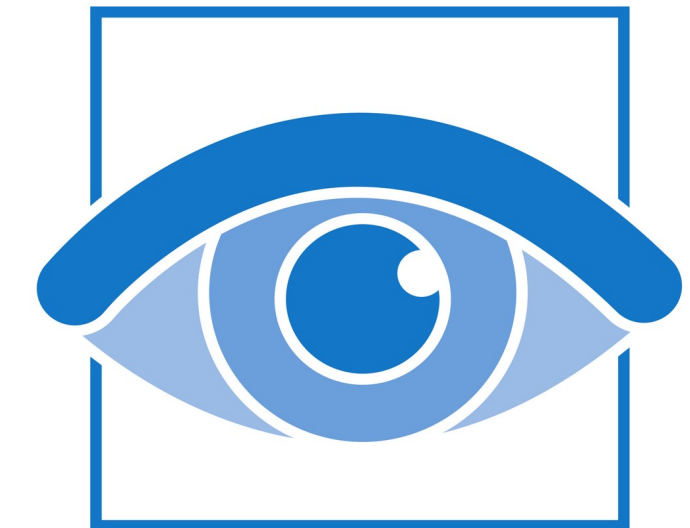

Office hours:

Monday: 08:00 – 13:00

Wednesday: 08:00 – 17:00

Thursday: 08:00 – 17:00

Friday: 08:00 – 16:00

TUM
Computer Vision Group

This guide introduces the computing environment of the Chair for Computer Vision & Artificial Intelligence. It explains how to access systems, where to store data, and whom to contact for support.

Technical University of Munich

Department of Informatics

Chair for Computer Vision & Artificial Intelligence

Boltzmannstrasse 3

85748 Garching

vision.in.tum.de

Personal copy of
Kalman Mahlich

Resources of the chair

Storage

You will be working on a NFS mounted **home directory** which is available on all computers and servers at the chair. This storage space offers high availability and is therefore more expensive. Please try to keep your data usage below 100GB. You'll receive weekly reminders if you exceed this soft limit.

Backed up daily.

Additional storage space can be found in /storage. See the **README** file there. You will find there:

- /storage/local/
Local disk space. Most of the time an additional HDD. Use this for compilation etc. But keep in mind that this storage space **is not backed up**. Please create a directory with your username there, to allow the mapping of the data.
- /storage/remote/
This is a magic directory which automounts the local storage of a remote computer if entering a directory named after a host. E.g: /storage/remote/atcremers47
- /storage/user/
Also a magic mount point. Change to a subdirectory named after your username. This should be your main personal data storage. This directory will be archived after your contract ends. **Backed up daily.**
- /storage/www/user/
Again a magic mount point. Your username is the magic word. All data here is available on <https://vision.in.tum.de/webshare/u/<username>>. Will be archived after your contract ends. **Backed up daily. Share files over https here.**

Network access

You can access the eduroam wifi using your TUMID.

Settings:

- Network ID: eduroam
- EAP Method: PWD
- Identity: <TUMID>@eduroam.mwn.de

Printers

The chair's default installation gives you access to the the Department's Xerox printers. For more information, visit <https://wiki.rbg.tum.de/Informatik/Benutzerwiki/XeroxDrucker>

- „followme“: A queue which does not print immediately, but “to your TUM card”. When putting your card on a printer, you can then choose to print the document.

SLURM workload manager

The chair hosts a number of multi-GPU servers for High-Performance Computing (HPC) jobs.

To find out more about this system, please visit

<https://vision.in.tum.de/intern/slurm>

A status page of the system can be found here:

<https://adm9.in.tum.de/slurm>

SSH

The whole network is behind a firewall. But since the IP addresses are global, you can SSH to any host using the **port 58022**. SSH keys are mandatory. You can save your public key on <https://adm9.in.tum.de>

The full hostname is in most cases <hostname>.cvai.cit.-tum.de.

You can also find out by using the command **hostname -f** or online using the URL

<https://adm9.in.tum.de/status/<hostname>>

All workstations of the chair share the same NFS \$HOME and have the slurm client tools installed.

Computer labs

There are some computers available where you can log in with your account via SSH

You can find a list of available computers at

<https://adm9.in.tum.de/status>

Please talk to your supervisor if you need any help finding a place to work.

Online resources

Additional information can be found here:

<https://vision.in.tum.de/intern> (internal wiki)

<https://adm9.in.tum.de> (change account details, different network tools, ...)

E-Mail: <https://www.it.tum.de/en/faq/it-services/e-mail/>

Gitlab: gitlab.lrz.de (or gitlab.vision.in.tum.de)

Cloud: syncandshare.lrz.de (or cloud.vision.in.tum.de)

Sharelatex: sharelatex.tum.de (or sl.vision.in.tum.de)

What to do in case of a fire

- Keep calm
- Report the fire
 - Activate fire alarm

- Emergency call
 - From mobile: 089.289.112
 - From office landline: 112
- Go to safety
 - Warn endangered persons
 - Evacuate people requiring assistance
 - Close doors
 - Follow escape routes indicated

- Do not use elevator
- Find collection point

- Follow instructions
- Try to extinguish the fire
 - Use fire extinguisher and/or hose

Account

Different accounts

You have three main accounts at the TUM which all have different password databases:

- **TUMID:** in the form of “ab12xyz”. This is used for your @tum.de email, tumonline, etc. Email address stays after your contract ends.
- **Faculty account:** This is used for your @in.tum.de mail, VPN and other faculty services. **Email address is deleted with your account.** Settings: <https://ucentral.in.tum.de/>
- **Chair account:** which is the same username as your faculty account (but a different password). Use this to log in to the computers and all the chair's services.

Username: maka

Password: kai7eiK(ei3ei

Password change

Chair account: **passwd** on any computer of the chair.

Faculty account: <https://ucentral.in.tum.de/>

TUMID: <https://campus.tum.de>

Doorplate, Web page (Employees only)

The data for the door sign and the website is generated from LDAP. To change this data, please use the form at <https://adm9.in.tum.de/userman>

Your **member page** at the chair's website can be created by logging in on vision.in.tum.de, then using the tool at “Select Action” → “User settings”. If you have a picture already, please send it to me for editing, otherwise contact me so we can take one.

E-Mail

Please take note that your @in.tum.de mail address will be deleted together with your account at the department of informatics. Your @tum.de address is, as of writing this document, lifelong. Your mailbox will be deleted together with your TUMID, but you can always set up a mail forward.

To redirect your @in.tum.de mail to your @tum.de mailbox, please use the online form at <https://ucentral.in.tum.de>

Mailing list

During account creation, you will be subscribed to the chair's mailing list (vision@in.tum.de), and unsubscribed on account deletion. Mails from this list will be delivered to your defined mailing address, by default your @in.tum.de address.
